INTRODUCTION AND OBJECTIVE

INTRODUCTION

Taabir is a crowdfunding platform that enables non-profit organizations and individuals to raise funds for causes that matter to them. Our goal is to create a world where everyone can make a positive impact by giving back to society. Through Taabir, we empower individuals to support the causes they care about, and help non-profits reach their fundraising goals. Together, we can make a real difference in the world.

OBJECTIVE

The objective of Taabir is to connect people and organizations who share a passion for social good, and empower them to make a positive impact in the world. By offering a simple, secure, and user-friendly platform for crowdfunding, we aim to democratize philanthropy and provide a new avenue for individuals to give back to the causes they care about. At Taabir, we believe that every donation, no matter how small, can make a real difference. We strive to create a world where generosity and compassion are the norm, and where every person can make a meaningful impact.

PROJECT CATEGORY

This application is developed using three tier architecture of Java and J2EE Technologies, HTML, CSS, JavaScript, Angular is used for front end designing & development and MySQL, Java Servlets are used as a back end or database. The connection between the front-end and the back-end is established by using JDBC-ODBC Bridge for MySQL Database.

Some style sheets and scripting technologies are used to enhance the dynamics of the project.

Frontend Stack: HTML, CSS, JavaScript with TypeScript and Angular

Backend Stack: MySQL, Java, JSP, Servlets

HARDWARE & SOFTWARE REQUIREMENTS

Hardware Requirements: -

- Intel® Xeon™ 2.0 GHz Processors with 256KB cache.
- 2GB RAM.
- 80 GB Hard Disk Drive.
- 3.5” – 1.44 MB Diskette Drive.
- 52X CD-ROM Drive.
- Intel® Pro 10/100+ LAN Card..
- The server should have a proper backup and recovery facility.

Software Requirements: -

- Figma Jamboards
- HTML
- CSS
- JavaScript
- Tailwind CSS
- Java
- JSP
- Java Servlets
- Tomcat
- MySQL

REQUIREMENTS SPECIFICATIONS PROJECT PLANNING & SCHEDULING

SOFTWARE REQUIREMENT SPECIFICATION

A software requirements specification (SRS) is a description of a software system to be developed, laying out functional and non-functional requirements, and may include a set of use cases that describe interactions the users will have with the software.

Software requirements specification establishes the basis for an agreement between customers and contractors or suppliers (in market-driven projects, these roles may be played by the marketing and development divisions) on what the software product is to do as well as what it is not expected to do. Software requirements specification permits a rigorous assessment of requirements before design can begin and reduces later redesign. It should also provide a realistic basis for estimating product costs, risks, and schedules.

The software requirements specification document enlists enough and necessary requirements that are required for the project development. To derive the requirements, we need to have clear and thorough understanding of the products to be developed or being developed. This is achieved and refined with detailed and continuous communications with the project team and customer till the completion of the software.

- **Software Development Process Model**

The incremental model is a software development process that breaks down a project into smaller, more manageable chunks, or increments. Each increment builds upon the previous one, adding functionality and features in a step-by-step manner. The process involves multiple phases: Requirements gathering and analysis, design, implementation, testing, and evaluation.

1. Introduction

Purpose

The primary goal of this Software Requirements Specification (SRS) document is to provide a comprehensive outline of the Taabir crowdfunding platform's functional and non-functional requirements.

Scope

This SRS focuses on the development of Taabir, a web-based crowdfunding platform for medical and NGO projects, built using Angular, Java Servlets (J2EE), and MySQL database.

Definitions, Acronyms, and Abbreviations

- Taabir: Crowdfunding platform
- J2EE: Java 2 Enterprise Edition
- MySQL: Open-source relational database management system
- SRS: Software Requirements Specification

2. Overall Description

Product Perspective

Taabir is an independent crowdfunding platform that connects project creators with potential supporters for medical and NGO causes.

Product Functions

Taabir enables users to create and manage projects, discover and support campaigns, and facilitate secure financial transactions between parties.

User Characteristics

Taabir serves individuals and organizations seeking financial support for medical and NGO projects, as well as contributors looking to fund these initiatives.

Constraints

Taabir must comply with relevant crowdfunding regulations and integrate with third-party payment gateways for secure transactions.

Assumptions and Dependencies

Users are expected to have compatible devices and internet connectivity, as well as a basic understanding of crowdfunding concepts.

3. Specific Requirements

Functional Requirements

- User Registration: Users should be able to create and manage their accounts.
- Project Creation: Users should be able to create and publish crowdfunding projects.
- Project Browsing: Users should be able to browse and filter available projects.
- Financial Transactions: Users should be able to contribute funds to projects securely.
- Communication: Users should be able to communicate with project creators and other supporters.

Non-Functional Requirements

- Performance: Taabir should load within 3 seconds and support up to 1000 concurrent users.
- Security: User data and transactions should be secure and encrypted.
- Usability: Taabir should have a user-friendly interface and intuitive navigation.

MODULES & TIME ESTIMATION

Modules and Processes

1. Actor: Admin

- a. **Module 1: Admin Login**
 - **Input-** Email, Password
 - **Process** - Login form submit
 - **Output:** Success / Failure
- b. **Module 2: Verify Fundraising Requests**
 - **Input-** Verified or Rejected
 - **Process** - Verify option
 - **Output:** Success / Failure
- c. **Module 3: Verify / Manage Users**
 - **Input-** Verified or Rejected
 - **Process** - Verify option
 - **Output:** Success / Failure
- d. **Module 4: Verify Payment Source**
 - **Input-** Verified or Rejected
 - **Process** - Verify option
 - **Output:** Success / Failure
- e. **Module 5: Create FAQs**
 - **Input-** FAQ title, FAQ Description, FAQ active
 - **Process** - FAQ form submit
 - **Output:** Success / Failure

2. Actor: User

- a. **Module 1: Registration**
 - **Input-** Name, email, mobile number
 - **Process** - Registration Form
 - **Output:** Success / Failure
- b. **Module 2: Login**

- **Input-** Email, Password
- **Process** - Login Form
- **Output:** Success / Failure

c. **Module 3: Create Fundraising Requests**

- **Input-** Amount, reason,
- **Process** - Fundraising request Form
- **Output:** Success / Failure

d. **Module 4: Fundraise contribution**

- **Input-** Amount, Misc info
- **Process** - Fund Raising Contribute form
- **Output:** Success / Failure

3. Actor: Guest

a. **Module 1: Guest Fundraise contribution**

- **Input-** Amount to contribute, name, PAN Card
- **Process** - Contribute to Funds Form
- **Output:** Success / Failure

Time Estimation: Gantt Chart

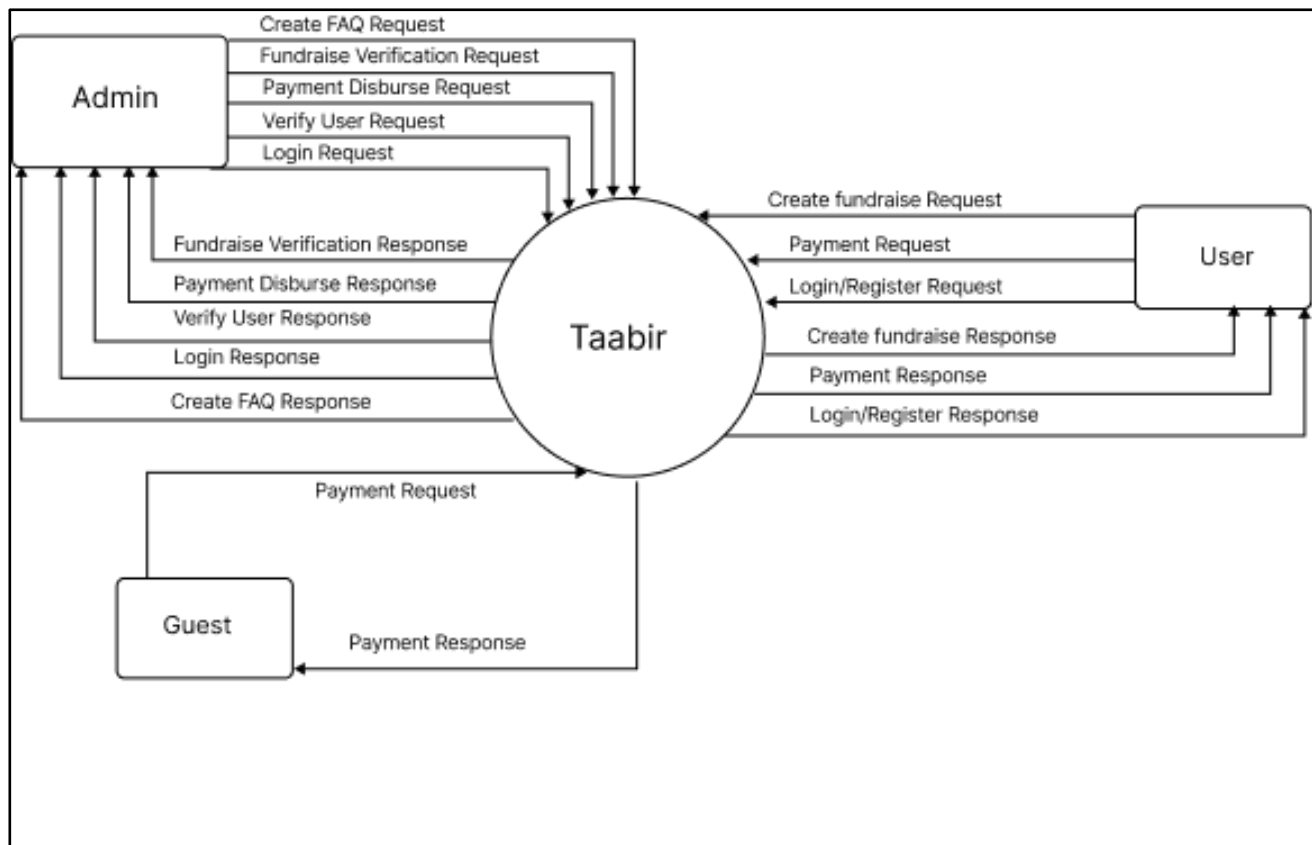

- **Gantt Chart**

is_active	bit	

TESTING

○ Objective

The main objective of testing is to uncover a host of errors, systematically and with minimum effort and time. Stating formally, we can say,

- Testing is a process of executing a program with the intent of finding an error.
- A successful test is one that uncovers an as yet undiscovered error.
- The tests are inadequate to detect possibly present errors.
- The software more or less confirms to the quality and reliable standards.

● Unit Testing

The purpose of the coding and unit testing phase of software development is to translate the software design into source code. Each component of the design is implemented as a program module. The end-product of this phase is a set of program modules that have been individually tested. To enable the engineers to write good quality programs, every software development organization normally formulates its own coding standards that suits itself.

● Integration & System Testing

Integration of different modules is undertaken once they have been coded and unit tested. During the integration and system testing phase, the modules are integrated in a planned manner. The different modules making up a software product are almost never integrated in one shot. Integration is normally carried out incrementally over a number of steps. DURING each integration step, the partially integrated system is tested and a set of previously planned modules are added to it. Finally, when all the modules have been successfully integrated and tested, system testing is carried out.

FUTURE SCOPE

Here are some future trends that can be opted in our product.

- Internationalisation: Expanding the platform to support fundraising for causes in other countries.
- Mobile app development: Building a mobile app to make the platform more accessible to donors and fundraisers on the go.
- Crowdlending: Adding a lending component to the platform, where donors can lend money to borrowers with a clear repayment plan, allowing for a more sustainable form of giving.
- Impact tracking: Adding features that allow users to track the impact of their donations in real-time.
- Community building: Building a community around the platform, where users can connect with each other and discuss causes that they care about.
- Advanced analytics: Developing advanced analytics features to provide users with insights on the impact of their donations and the performance of their campaigns.

INTRODUCTION AND OBJECTIVE

INTRODUCTION

Taabir is a crowdfunding platform that enables non-profit organizations and individuals to raise funds for causes that matter to them. Our goal is to create a world where everyone can make a positive impact by giving back to society. Through Taabir, we empower individuals to support the causes they care about, and help non-profits reach their fundraising goals. Together, we can make a real difference in the world.

OBJECTIVE

The objective of Taabir is to connect people and organizations who share a passion for social good, and empower them to make a positive impact in the world. By offering a simple, secure, and user-friendly platform for crowdfunding, we aim to democratize philanthropy and provide a new avenue for individuals to give back to the causes they care about. At Taabir, we believe that every donation, no matter how small, can make a real difference. We strive to create a world where generosity and compassion are the norm, and where every person has the opportunity to make a meaningful impact.

PROJECT CATEGORY

This application is developed using three tier architecture of Java and J2EE Technologies, Figma is used for front end designing but JSP is used as tools and techniques and MySQL is used as a back end or database. The connection between the front-end and the back-end is established by using JDBC-ODBC Bridge.

Some style sheets and scripting technologies are used to enhance the dynamics of the Project.

Frontend Stack: HTML, CSS, JavaScript with TypeScript and Angular

Backend Stack: MySQL, Java, JSP, Servlets

SYSTEM ANALYSIS

"**System analysis**" is a problem-solving technique that decomposes a system into its component pieces for the purpose of the studying how well those component parts work and interact to accomplish their purpose. According to the Merriam-Webster dictionary, systems analysis is "the process of studying a procedure or business in order to identify its goals and purposes and create systems and procedures that will achieve them in an efficient way". Analysis and synthesis, as scientific methods, always go hand in hand; they complement one another. Every synthesis is built upon the results of a preceding analysis, and every analysis requires a subsequent synthesis to verify and correct its results.

This field is closely related to requirements analysis or operations research. It is also "an explicit formal inquiry carried out to help someone (referred to as the decision maker) identify a better course of action and make a better decision than she might otherwise have made.

The principal objective of the systems-analysis phase is the specification of what the system needs to do to meet the requirements of end users. In the systems-design phase such specifications are converted to a hierarchy of charts that define the data required and the processes to be carried out on the data so that they can be expressed as instructions of a System program. Many information systems are implemented with generic software, rather than with such custom-built.

REQUIREMENTS SPECIFICATIONS PROJECT

PLANNING & SCHEDULING

SOFTWARE REQUIREMENT SPECIFICATION

A software requirements specification (SRS) is a description of a software system to be developed, laying out functional and non-functional requirements, and may include a set of use cases that describe interactions the users will have with the software.

Software requirements specification establishes the basis for an agreement between customers and contractors or suppliers (in market-driven projects, these roles may be played by the marketing and development divisions) on what the software product is to do as well as what it is not expected to do. Software requirements specification permits a rigorous assessment of requirements before design can begin and reduces later redesign. It should also provide a realistic basis for estimating product costs, risks, and schedules.

The software requirements specification document enlists enough and necessary requirements that are required for the project development. To derive the requirements we need to have clear and thorough understanding of the products to be developed or being developed. This is achieved and refined with detailed and continuous communications with the project team and customer till the completion of the software.

- **Software Development Process Model**

The incremental model is a software development process that breaks down a project into smaller, more manageable chunks, or increments. Each increment builds upon the previous one, adding functionality and features in a step-by-step manner. The process involves multiple phases: Requirements gathering and analysis, design, implementation, testing, and evaluation.

1. Introduction

Purpose

The primary goal of this Software Requirements Specification (SRS) document is to provide a comprehensive outline of the Taabir crowdfunding platform's functional and non-functional requirements.

Scope

This SRS focuses on the development of Taabir, a web-based crowdfunding platform for medical and NGO projects, built using Angular, Java Servlets (J2EE), and MySQL database.

Definitions, Acronyms, and Abbreviations

- Taabir: Crowdfunding platform
- J2EE: Java 2 Enterprise Edition
- MySQL: Open-source relational database management system

- SRS: Software Requirements Specification

2. Overall Description

Product Perspective

Taabir is an independent crowdfunding platform that connects project creators with potential supporters for medical and NGO causes.

Product Functions

Taabir enables users to create and manage projects, discover and support campaigns, and facilitate secure financial transactions between parties.

User Characteristics

Taabir serves individuals and organizations seeking financial support for medical and NGO projects, as well as contributors looking to fund these initiatives.

Constraints

Taabir must comply with relevant crowdfunding regulations and integrate with third-party payment gateways for secure transactions.

Assumptions and Dependencies

Users are expected to have compatible devices and internet connectivity, as well as a basic understanding of crowdfunding concepts.

3. Specific Requirements

Functional Requirements

- User Registration: Users should be able to create and manage their accounts.
- Project Creation: Users should be able to create and publish crowdfunding projects.
- Project Browsing: Users should be able to browse and filter available projects.
- Financial Transactions: Users should be able to contribute funds to projects securely.
- Communication: Users should be able to communicate with project creators and other supporters.

Non-Functional Requirements

- Performance: Taabir should load within 3 seconds and support up to 1000 concurrent users.
- Security: User data and transactions should be secure and encrypted.
- Usability: Taabir should have a user-friendly interface and intuitive navigation.

DATA FLOW DIAGRAM

Data flow diagram is used to depict exactly the process of data transformation. It visualises the process of data transformation, relations and data processing among various inputs and outputs and internal/external entities of the system.

Elements of the DFD:-

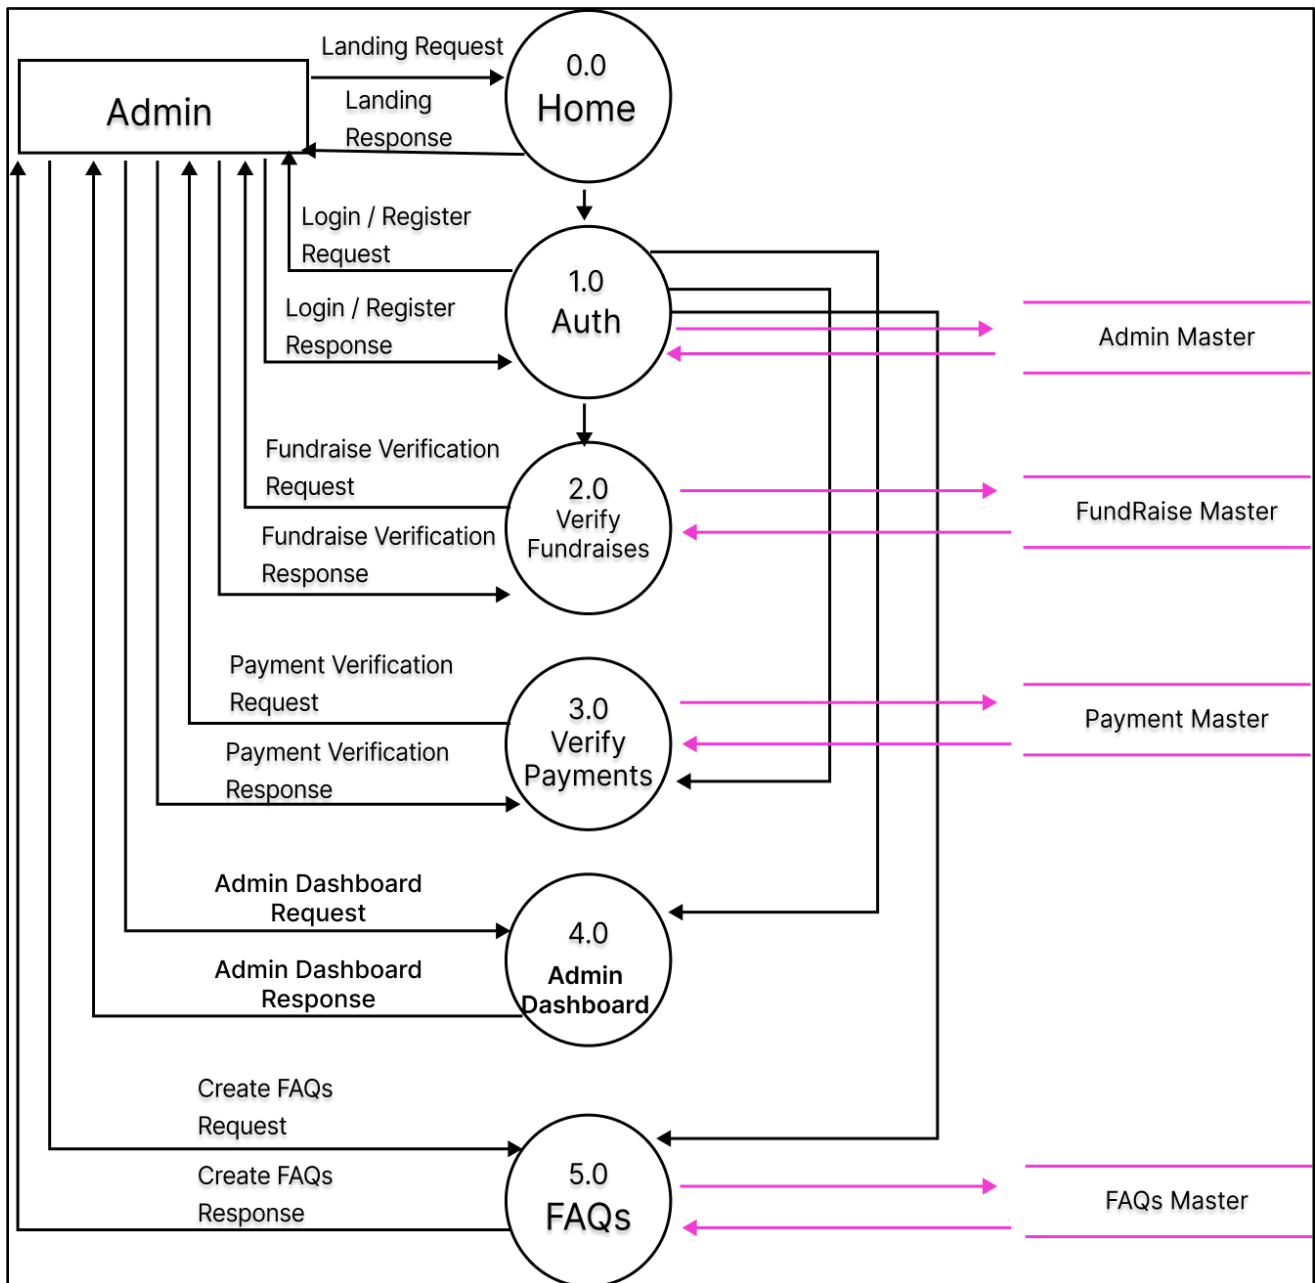

1. Level 0 DFD

Level 0 DFD : Admin , User and Guest

2. Admin DFDs

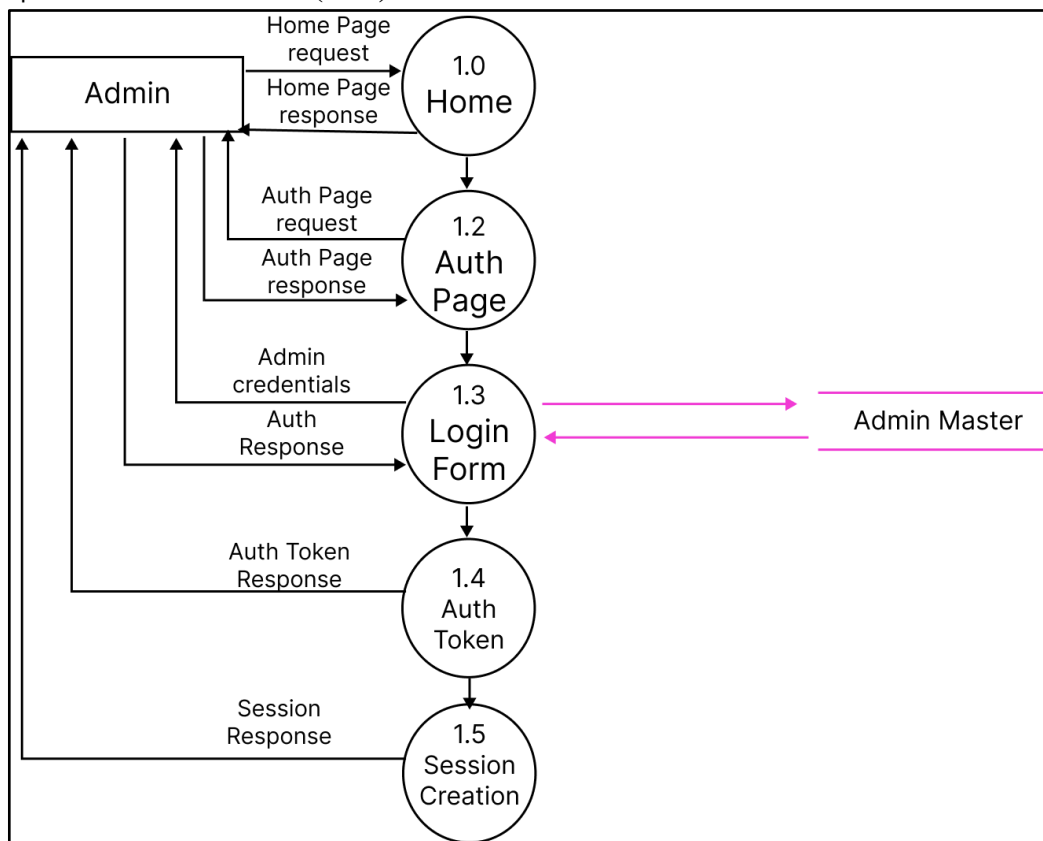

Level 1 DFD

Level 1 DFD : Admin

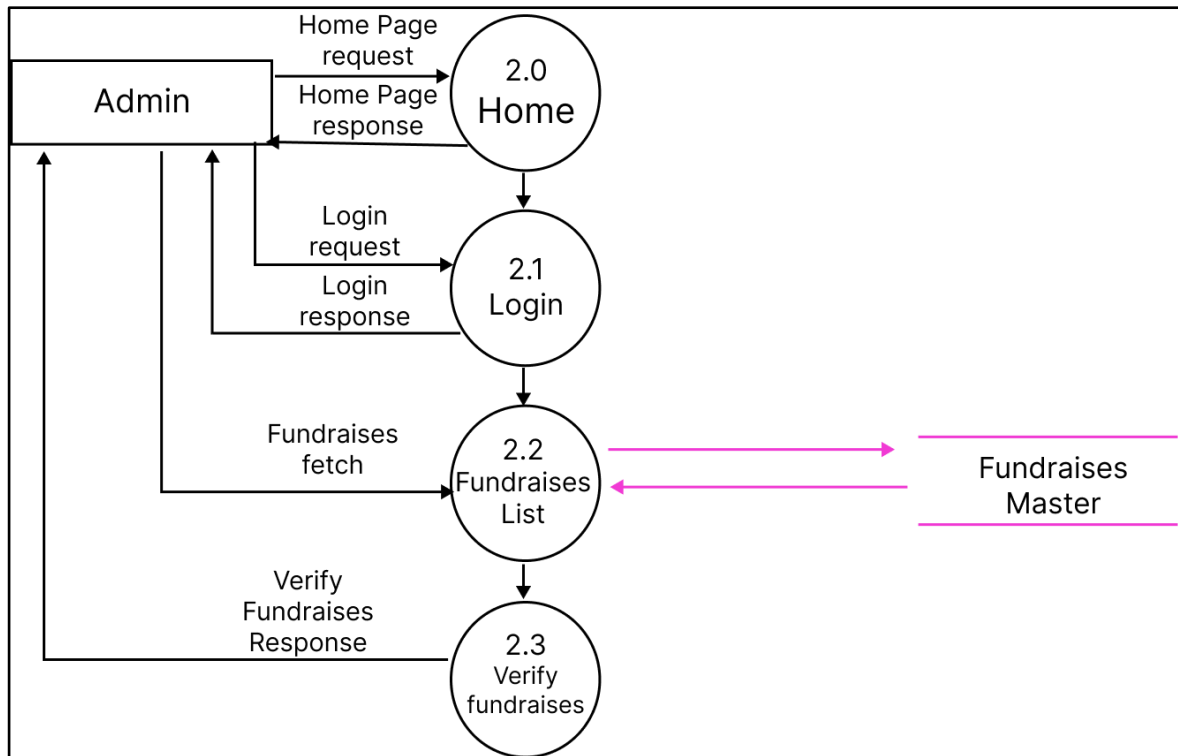

Level 2 DFD

Level 2 DFD | Admin auth Module(1.0)

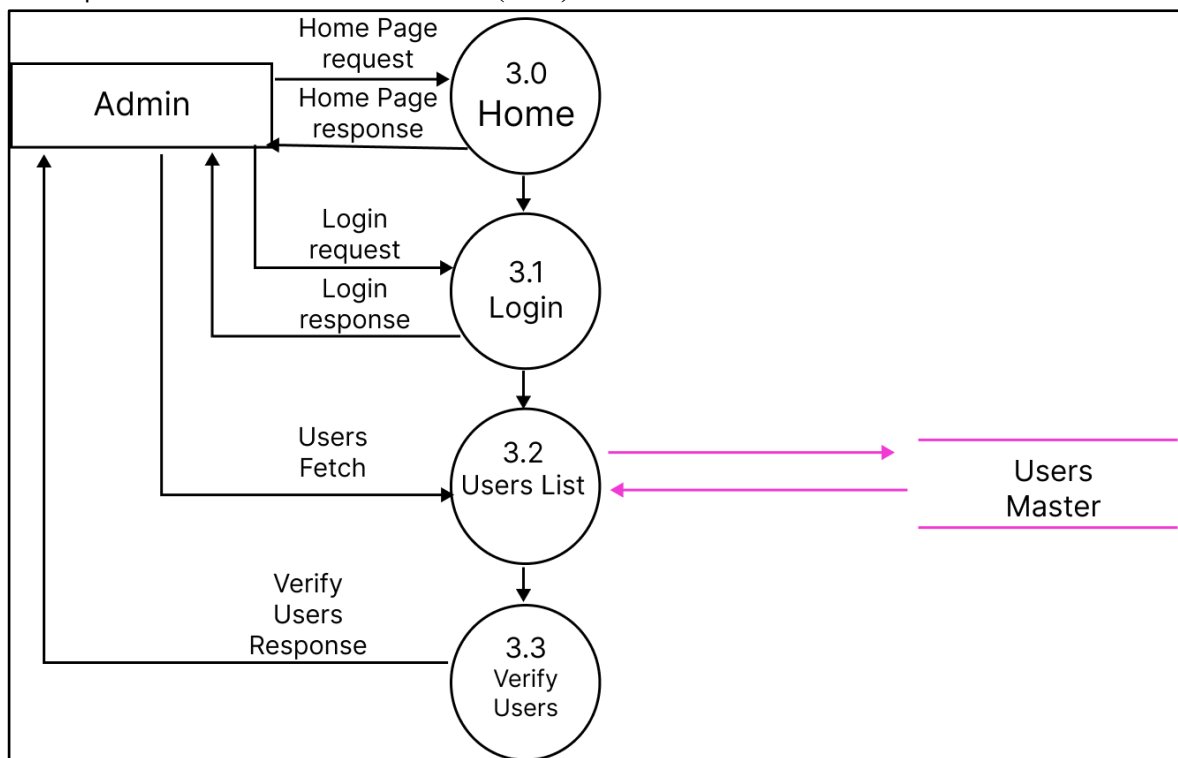

Level 2 DFD : Admin Login and Session Creation

Level 2 DFD | Verification of Fundraises (2.0)

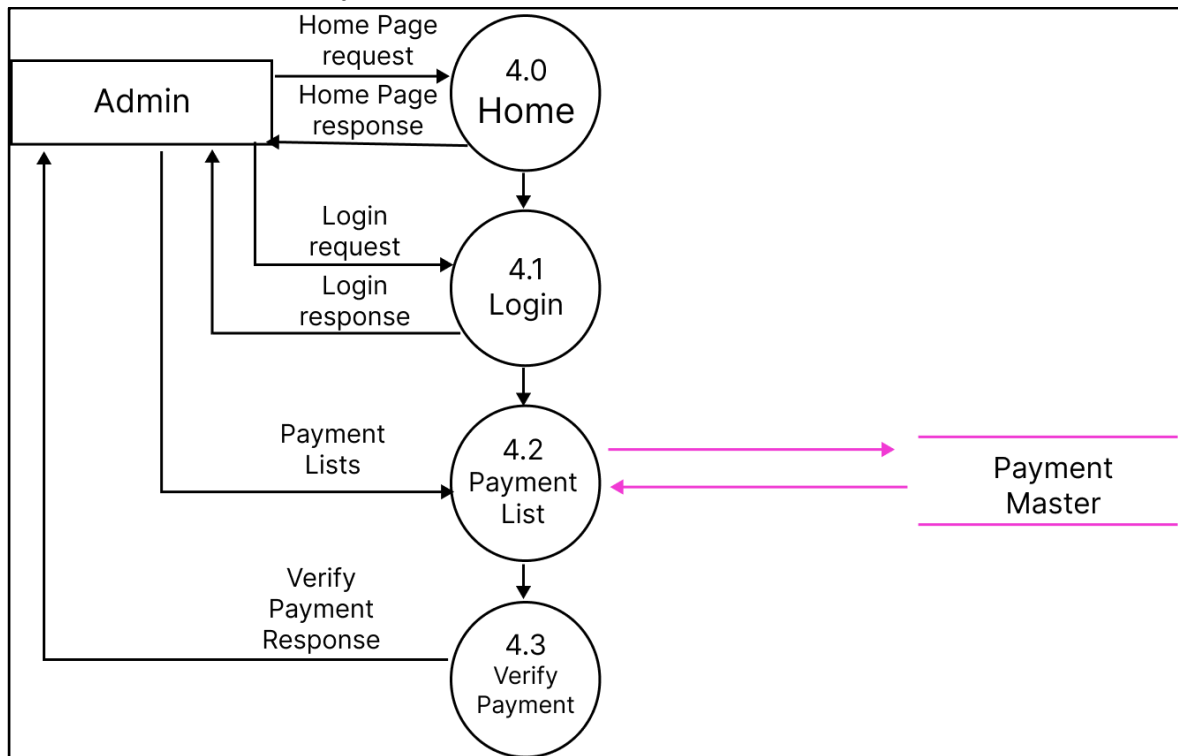

Level 2 DFD : Fundraises verification By Admin

Level 2 DFD | Verification of Users Module(3.0)

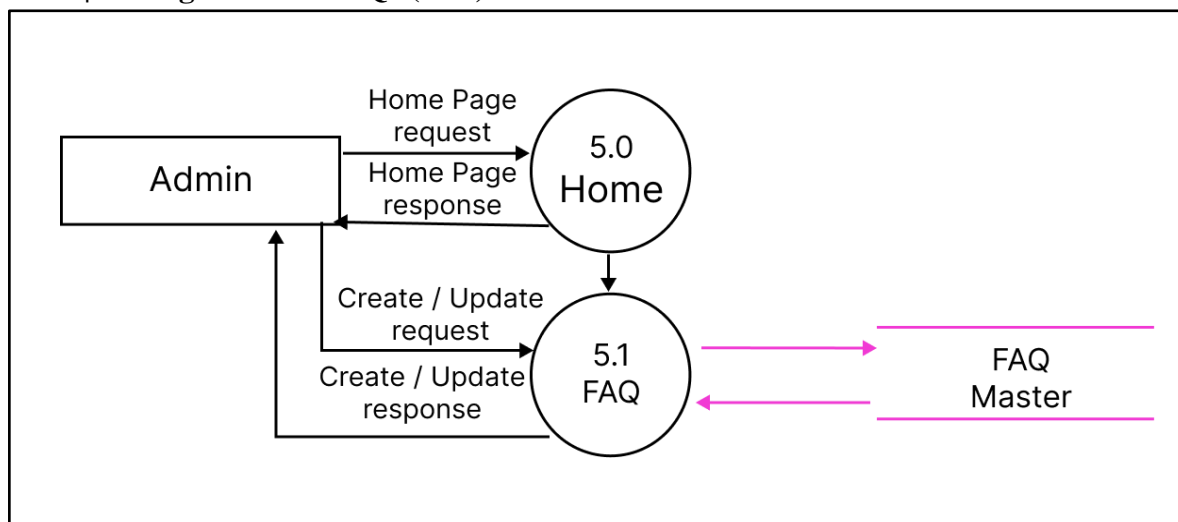

Level 2 DFD : Verify Users by Admin

Level 2 DFD | Verification of Payments Module(4.0)

Level 2 DFD : Admin Payment Verification

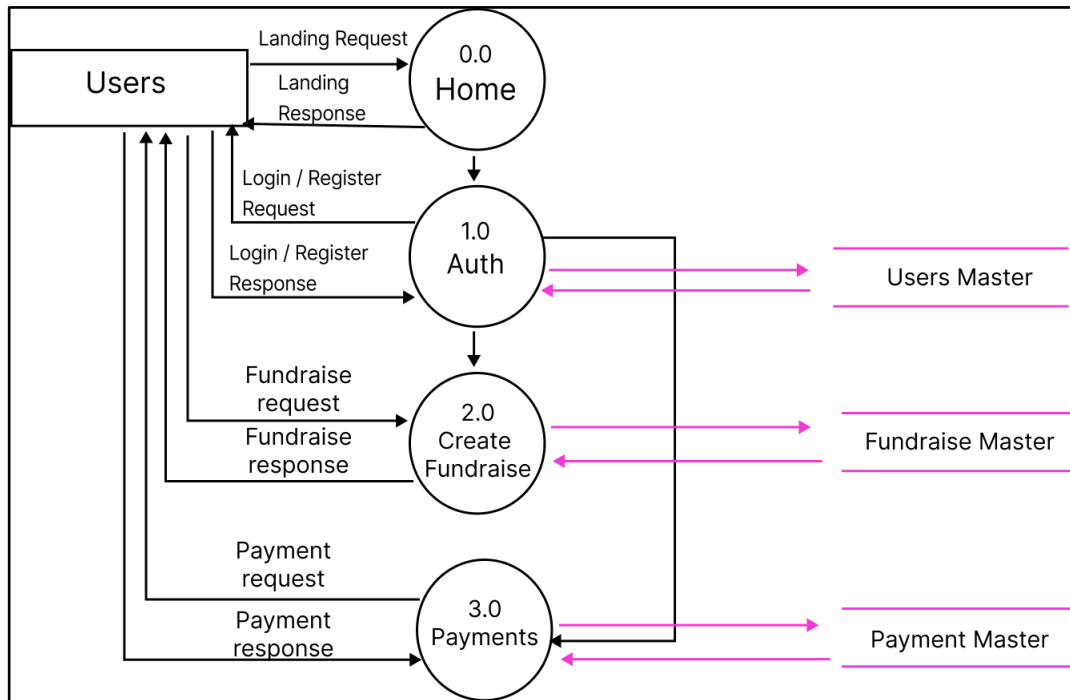

Level 2 DFD | Management of FAQs (5.0)

Level 2 DFD : Admin FAQs management for frontend display

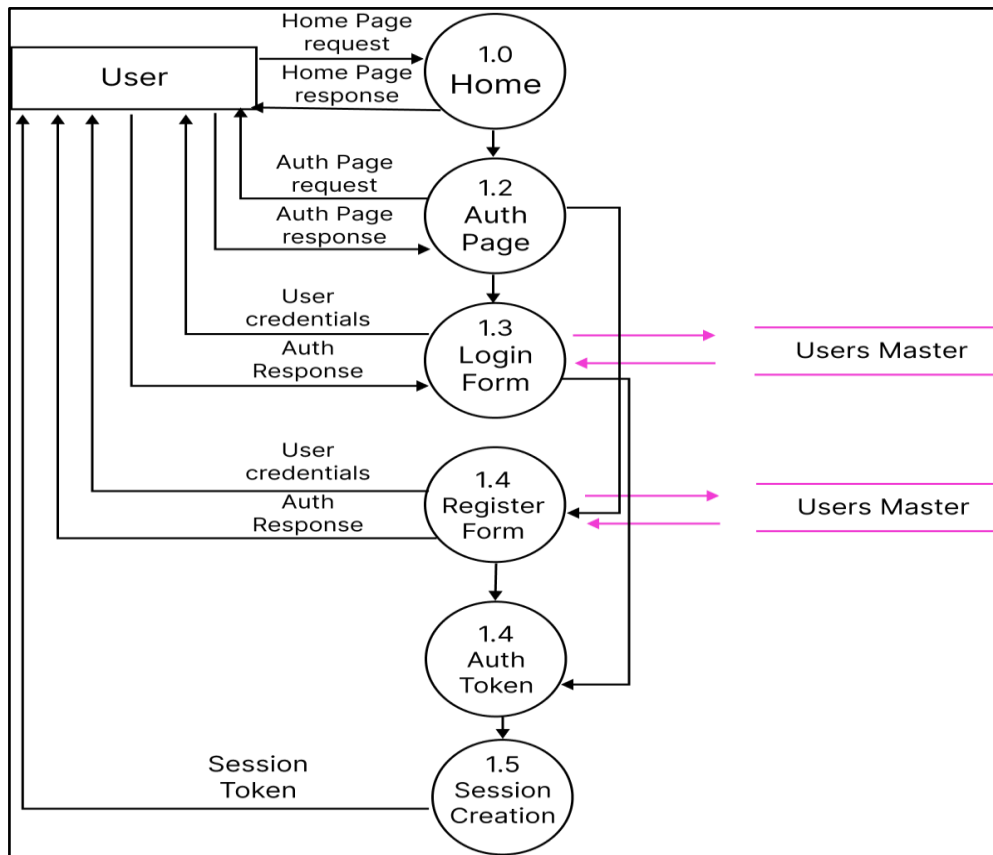

2. Users DFDs

Level 1 DFD

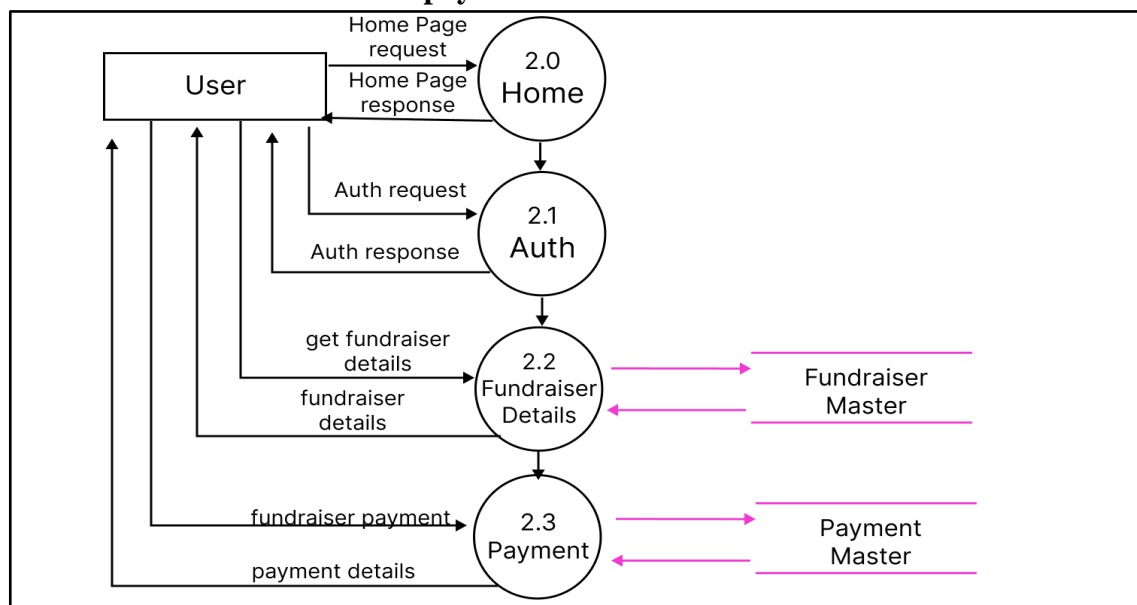

Level 1 DFD : User Module

Level 2 DFD: User Auth (Login / Register) Module (1.0)

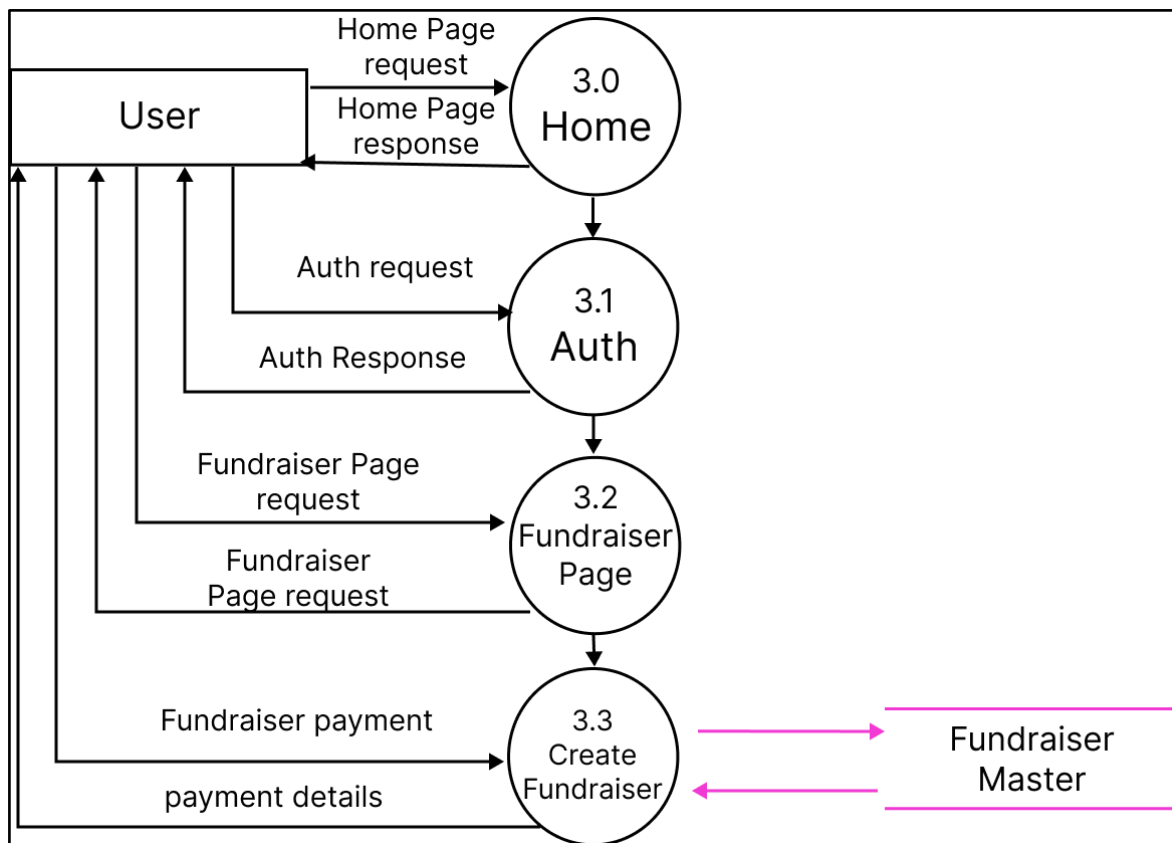

Level 2 DFD : User Register / Login

Level 2 DFD: User Module Fundraiser payment

Level 2 DFD : User Fundraiser contribution

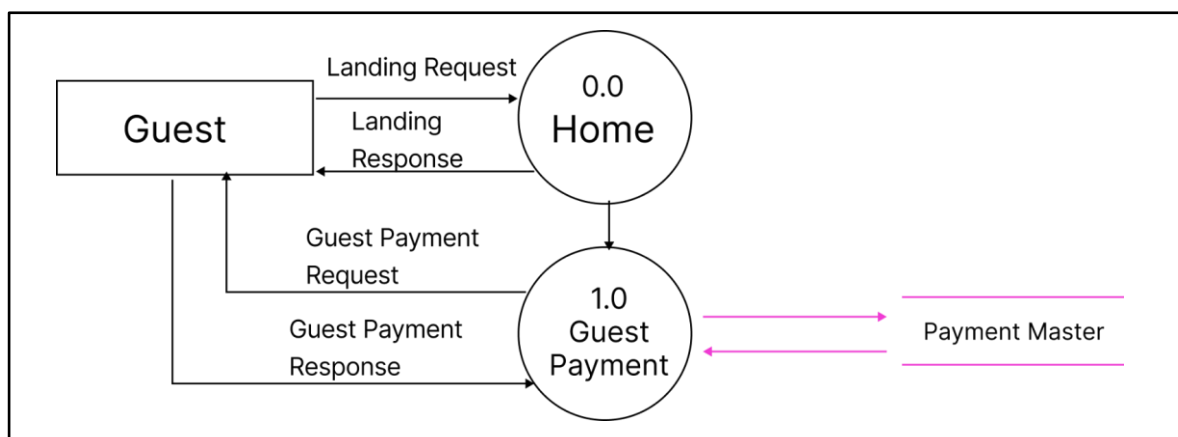

Level 2 DFD: User Fundraiser Creation

Level 2 DFD : User Fundraiser creation

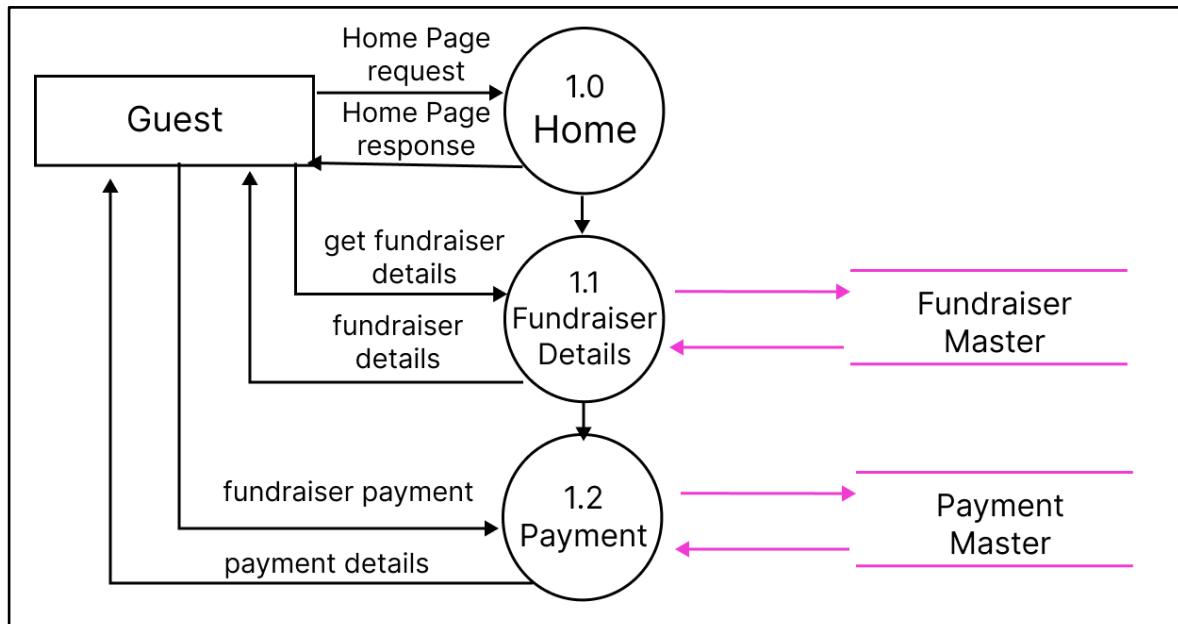

3. Guest DFDs

Level 1 DFD : Guest

Level 1 DFD : Guest Module

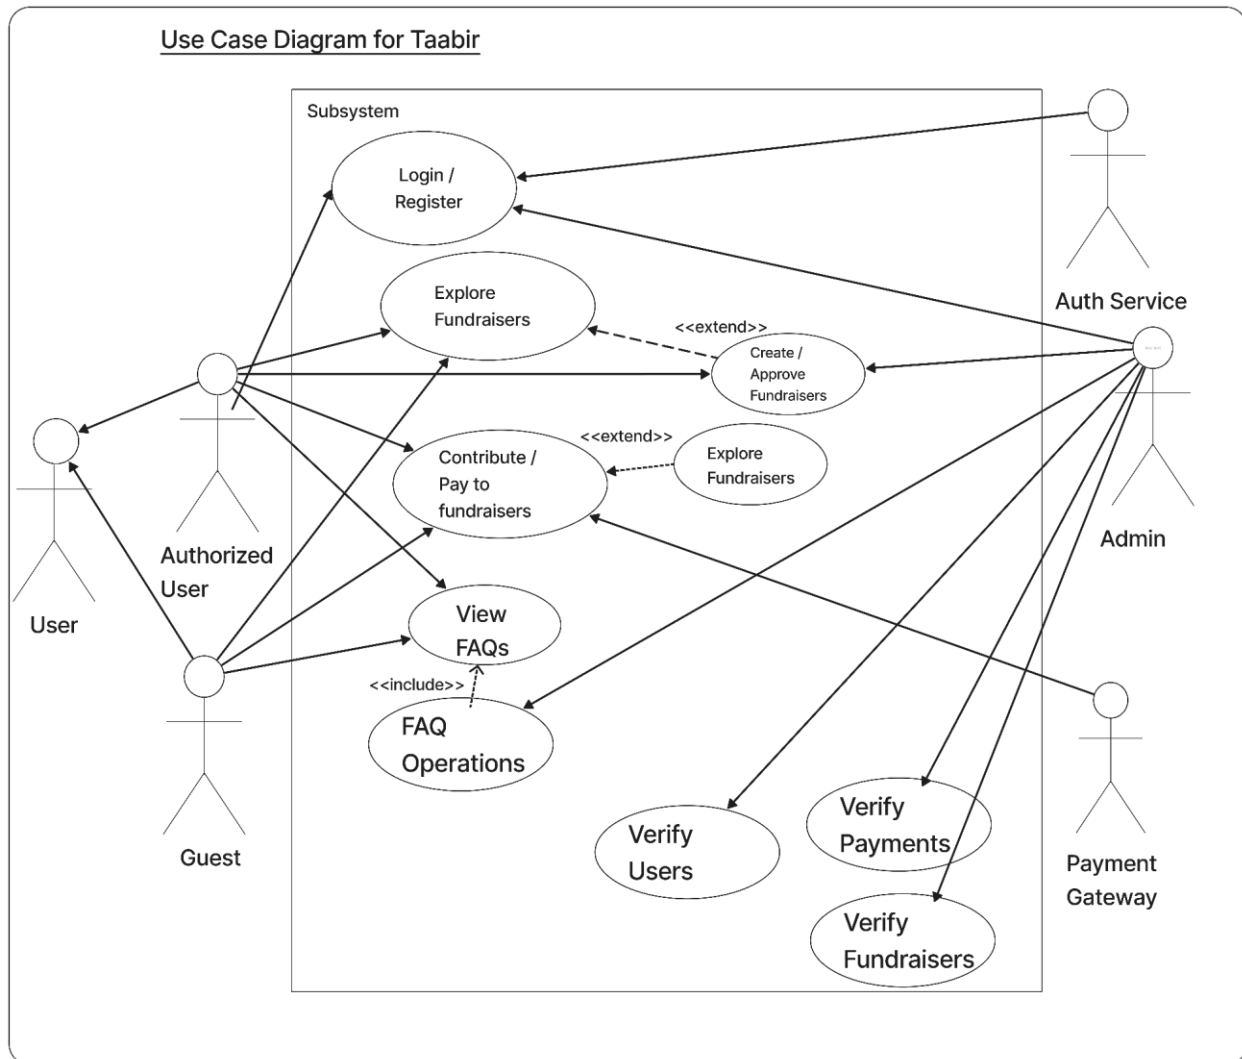

Level 2 DFD Guest Module for fundraising payment

Level 2 DFD : Guest / Anonymous Payment

USE CASE DIAGRAM (UML)

A Use Case Diagram is a vital tool in system design, it provides a visual representation of how users interact with a system. It serves as a blueprint for understanding the functional requirements of a system from a user's perspective, aiding in the communication between stakeholders and guiding the development process.

Note: All the cases here depict the functionality of the project

Actors:

- Admin = Related to Admin Module
- User = Authorised and Guest, will do tasks like creating the fundraisers and contributing to them
- Payment Gateway = will take payment and provide payment details
- Auth Service = Will check for the user33333 if it is logged in or not.

ER DIAGRAM

An entity–relationship model is the result of using a systematic process to describe and define a subject area of business data. It does not define business process; only visualise business data. The data is represented as components (entities) that are linked with each other by relationships that express the dependencies and requirements between them, such as: one building may be divided into zero or more apartments, but one apartment can only be located in one building. Entities may have various properties (attributes) that characterise them. Diagrams created to represent these entities, attributes, and relationships graphically are called entity–relationship diagrams.

An ER model is typically implemented as a database. In the case of a relational database, which stores data in tables, every row of each table represents one instance of an entity. Some data fields in these tables point to indexes in other tables; such pointers are the physical implementation of the relationships.

PROPERTIES OF E-R DIAGRAM:-

1) ENTITY

:-

2) RELATIONSHIP :-

3) ATTRIBUTE :-

ER DIAGRAM (Taabir)

DATABASE DESIGN

1. **users** (Users Table)

Field Name	Type	Constraints	Description
user_id	int	Primary Key	Unique ID for users table
name	text	-	Name of the user
email	text	Unique	Email of the user
mobile	Big int	Unique	Mobile of the user
pan_card	text	-	PAN Card of the user
password	text	-	Password for user account
is_verified	bit	Default (0)	Whether user is verified or not
user_type	int	-	User Type (1= Individual, 2 = NGO)
ngo_id	varchar (50)	Default(NULL)	NGO Darpan Id (If user_type is NGO)
website	varchar(200)	Default(NULL)	NGO Website(If user_type is NGO)

2. **admin** (Admin Table)

Field Name	Type	Constraints	Description
admin_id	int	Primary Key	Unique ID for admin table
name	text	-	Admin name
email	text	-	Admin email
mobile_number	Big int	-	Admin mobile
permissions	text	-	Admin permissions
password	text	-	Admin Password

3. **payments**(Payment Table)

Field Name	Type	Constraints	Description
payment_id	int	Primary Key	Unique Id for payment table
amount	text	-	Payment amount
user_id	int	foreign key	Payment user id
fund_id	int	foreign key	Payment fundraiser id
is_guest	bit	-	Whether it a guest payment or not
is_verified	bit	Default (0)	Is Payment verified
payment_reference_number	varchar(255)	-	Payment reference id for each payment
payment_mode	int	-	1 = UPI, 2 = Card, 3 = Wallet
payment_creds	text	-	Encoded Payment Details like UPI ID,
payment_date	datetime	Default (Current timestamp)	Payment done date

4. **fundraises** (Fundraising Request)

Field Name	Type	Constraints	Description
fund_id	int	Primary Key	Unique ID for fundraiser
amount	float	-	Amount of fundraiser
user_id	int	Unique, foreign key	User Id of Fundraiser creator
is_verified	bit	Default (0)	Verified by Admin
is_active	bit	Default (0)	If it is completed / active
title	text	-	Main Title of fundraiser
description	text	-	Description of fundraiser
image_url	text	-	Main Thumbnail of fundraiser
account_name	varchar(255)	-	Account Name of creator
account_number	varchar(20)	-	Account Number of creator
bank_name	varchar(200)	-	Bank Name of creator
created_at	date	Default (current_timestamp)	Date on which Fundraiser is created

5. **guests** (Guests)

Field Name	Type	Constraints	Description
guest_id	int	Primary Key	Guest Unique ID
amount	int	-	Amount guest paid
guest_reference_number	text	Unique	Payment reference number
fund_id	int	Foreign key	Fundraiser ID that is contributed by guest
is_active	bit	Default (0)	Whether guest payment is active

6. FAQ

Field Name	Type	Constraints	Description
faq_id	int	Primary Key	Unique Id for every FAQ
title	text	-	Title of FAQ
description	text	Unique	FAQ description
is_active	bit	Default (0)	Is Active to be visible to user

);
```

CODING

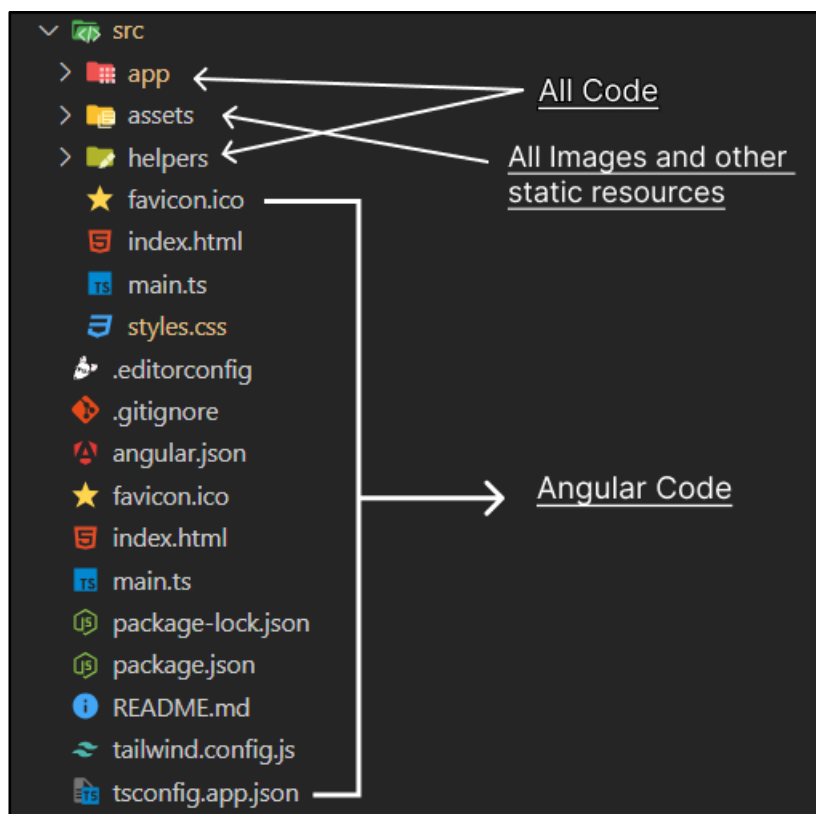

Note: For **frontend** I am using **HTML, CSS with Tailwind CSS, Javascript with Angular Framework**. And for **Backend** I am using **Java Servlets and JSP (J2EE)** with **REST API** approach, **MySQL** and APIs like **UploadClient** and **Mailjet**.

→ In Angular instead of javascript, HTML, CSS in one file, Angular uses a modular approach, with separate files for components, services, modules, and stylesheets. It also utilises TypeScript, which provides stricter type checking and OOP features. Coding in Angular involves using declarative templates (HTML+Angular expressions) and components with TypeScript files. Vanilla JS, HTML, and CSS, on the other hand, use plain HTML, CSS, and JavaScript without any special syntax. The structure is more basic and often involves loading multiple scripts in a single HTML file.

→ Using **Angular 17** and **Tailwind CSS 3.0**

Frontend Folder Structure

A folder structure is a directory file tree that is used to show where each file of a folder is located.

Folder structure for all HTML, CSS and Angular Files

Frontend Code

1. Main Files

- **Main index.html (src\index.html)**

```
<!doctype html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <title>Taabir | The Crowd Funding App</title>
  <base href="/">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <link rel="icon" type="image/x-icon" href="favicon.ico">
</head>
<body>
  <app-root></app-root>
</body>
</html>
```

- **Main TypeScript File (src\main.ts)**

```
import { bootstrapApplication } from '@angular/platform-browser';
import { appConfig } from './app/app.config';
import { AppComponent } from './app/app.component';

bootstrapApplication(AppComponent, appConfig)
  .catch((err) => console.error(err));
```

- **Main Style CSS File (src\style.css)**

```
/* You can add global styles to this file, and also import other style files */

@tailwind base;
@tailwind components;
@tailwind utilities;

.glass-bg{
  @apply bg-gray-500 rounded-md bg-clip-padding backdrop-filter backdrop-blur-sm bg-opacity-20
  shadow text-white;
}

.button-group {
```

```

    @apply flex space-x-2 justify-center gap-3;
  }

  [type=checkbox]{
    @apply rounded outline-none ring-0 shadow-none;
  }

  :disabled {
    @apply opacity-50 cursor-not-allowed;
  }

```

2. Home Page

- **cta.component.html** (src\app\pages\home\cta\cta.component.html)

```

<!-- Part of Home Page -->

];
```

26. Helpers & Data Models (Required for extra functionality)

- **auth.ts (src\helpers\auth.ts)**

```
export function isLoggedIn() {  
  return localStorage.getItem('auth-token') !== null;  
}
```

```
export function isAdmin() {  
  if (isLoggedIn()) {  
    return localStorage.getItem('role') !== null; }  
  else  
    return false;  
}
```

```
export function logout() {  
  localStorage.removeItem('auth-token');  
  localStorage.removeItem('role');  
  localStorage.removeItem('auth-id');  
  location.href = '/';  
}
```

- **case-helper.ts (src\helpers\case-helper.ts)**

```
import { HttpRequest } from '@angular/common/http';

export function toSnakeCaseRequest(req: HttpRequest<any>): HttpRequest<any> {

  if (!req.body) {
    return req;
  }

  const snakeCaseBody = convertKeysToSnakeCase(req.body);

  return req.clone({ body: snakeCaseBody });
}

export function toSnakeCaseBody(req: any): any {

  if (!req) {
    return req;
  }

  const snakeCaseBody = convertKeysToSnakeCase(req);

  return snakeCaseBody;
}

function convertKeysToSnakeCase(obj: any): any {
  if (typeof obj !== 'object' || obj === null) {
    return obj;
  }
  return Array.isArray(obj)
    ? obj.map(convertKeysToSnakeCase) // Recursively convert array elements
    : Object.entries(obj).reduce(
      (acc, [key, value]) => ({
        ...acc,
        [key.replace(/\B([A-Z])/, '_$1').toLowerCase()]: convertKeysToSnakeCase(
          value
        ),
      }),
      {}
    );
}
```

```

export function convertToCamelCaseResponse(obj: any): any {
  if (typeof obj !== 'object' || obj === null) {
    return obj;
  }

  return Array.isArray(obj)
    ? obj.map(convertToCamelCaseResponse) // Recursively convert array elements
    : Object.entries(obj).reduce(
        (acc, [key, value]) => ({
          ...acc,
          [key.replace(/([_][a-z])/g, (_, char) => char.toUpperCase()).replaceAll('_', '')]:
            convertToCamelCaseResponse(
              value
            ),
        }),
        {}
      );
}

```

- **url-helper.ts (src\helpers\url-helper.ts)**

```

export const baseUrl = (uri?: string) => `http://localhost:8080/taabir/${uri ?? ''}`;

```

- **fundraises.ts (src\app\data\fundraises.ts)**

```

export enum PaymentMode {
  UPI = 1,
  Card = 2,
  Wallet = 3,
}

export interface Payment {
  paymentId: number;
  fundId: number;
  userId: number;
  paymentMode: number;

2. About Screen

About Us

Welcome to Taabir, a pioneering crowdfunding platform dedicated to transforming lives and fueling dreams. We connect compassionate individuals, groups, and organizations worldwide, empowering them to create meaningful change through collective action. Founded in 2022, Taabir has already helped countless individuals raise funds for various causes, including medical emergencies, education, disaster relief, and innovative projects. Our mission is to build a global community that uplifts those in need and cultivates a culture of empathy and generosity. At Taabir, we believe in the power of unity and collaboration. Our platform provides the tools and resources for people to come together and turn ideas into reality, creating a brighter future for all. We are committed to fostering a safe, transparent, and inclusive environment that encourages continuous growth and positive change. Join Taabir and become part of a movement that celebrates the potential of every person to make a difference. With your help, we can turn dreams into reality and build a better, more compassionate world for everyone..

8. Register Screen

The image displays two screenshots of the Register Screen for the TAABIR application. Both screenshots feature a header with the TAABIR logo and navigation links (Home, About, Explore, Contact), and a Login button in the top right corner.

Top Screenshot: Sign in to your Account

The form is titled "Sign in to your Account" and includes the following fields:

- Full Name:
- Email address:
- Mobile Number:
- User Type:
- PAN card:
- Password:

A red bar is visible at the bottom of the form area. On the right side, there is a Windows activation notice: "Activate Windows Go to Settings to activate Windows."

Bottom Screenshot: Sign Up

The form is titled "Sign Up" and includes the following fields:

- Mobile Number:
- User Type:
- PAN card:
- Password:

Below the form fields is a red "Sign Up" button and a link: "Don't have an Account yet [Register Now!](#)". On the right side, there is a Windows activation notice: "Activate Windows Go to Settings to activate Windows."

At the bottom of the page, there is a copyright notice: "Copyright © Taabir 2024".

16. Admin FAQs Screen

The screenshot shows the Admin FAQs screen. The header includes the Taabir logo, user information "Hi, Admin", and a "Log Out" button. A sidebar on the left contains links to Home, FAQs, fundraisers, Users, and Payments. The main content area is titled "FREQUENTLY ASKED QUESTIOND" and features a "Create FAQ" button. Below this is a table with columns for ID, Question, Answer, Actions, and Active. The table contains three entries. At the bottom right, there is a message: "Activate Windows Go to Settings to activate Windows."

ID	Question	Answer	Actions	Active
1	Are you fraud??	We are fully genuine organisation.	Edit	<input checked="" type="checkbox"/>
2	What payment methods do you have?	From UPI to credit cards we provide all services for you.	Edit	<input type="checkbox"/>
3	is anonymous payments allowed?	Yes Guest payments are allowed.	Edit	<input checked="" type="checkbox"/>

All FAQs Screen - Where FAQs can be created and Edited and Toggled

17. Create FAQ Screen

The screenshot shows the "CREATE A FAQ" modal form overlaid on the Admin FAQs screen. The modal has a title bar "CREATE A FAQ" with a close button. It contains input fields for "Title" (with placeholder "title") and "Description" (with placeholder "Description"). There is an "Active" checkbox which is currently unchecked. At the bottom of the modal is an "Add" button. The background shows the same Admin FAQs screen as in the previous screenshot.

TEST CASES

T17	Admin FAQ Page	Go to http://localhost:7777/account/faq	On going on URL, Admin all FAQs display page will be displayed, if you are an admin	As expected	Pass

FUTURE SCOPE

Here are some future trends that can be opted in our product.

- Internationalisation: Expanding the platform to support fundraising for causes in other countries.
- Mobile app development: Building a mobile app to make the platform more accessible to donors and fundraisers on the go.
- Crowdlending: Adding a lending component to the platform, where donors can lend money to borrowers with a clear repayment plan, allowing for a more sustainable form of giving.
- Impact tracking: Adding features that allow users to track the impact of their donations in real-time.
- Community building: Building a community around the platform, where users can connect with each other and discuss causes that they care about.
- Advanced analytics: Developing advanced analytics features to provide users with insights on the impact of their donations and the performance of their campaigns.
